

Small Class Size for More One-on-One Instructor Time

412 Instrument Training ~ October 23-25, 2007

Expand your existing analytical capabilities and skills by attending Guided Wave's maintenance or chemometrics training. Our courses are always instructed by knowledgeable experts, such as; Jim Low our Service Business Director with 16 years experience at Guided Wave, and our Chemometrician of 20 years, Susan Foulk.

Currently our **Maintenance Course** focuses on the Model 412 design. The Model 310/ProSpec is similar to the model 412, so the course will provide a good basis of knowledge for those instruments too. The **Method Development/Chemometrics Course** is not instrument dependent, but we do use the Model 412's for the data collection. Our three-day training runs Tuesday through Thursday. The two courses run concurrently, choose either one for \$1950.

Both courses include:

- classroom and hands-on activities
- copies of all training materials
- daily lunches and a hosted dinner
- small class size for more one-on-one instruction

These courses are next offered October 23-25, at our Rancho Cordova, California headquarters and manufacturing facility.
